The importance of calf health

Maxx Calf Health is a controlled intake, low moisture, molasses lick block.

Developed specifically for calves and youngstock, it contains a number of unique ingredients to support health, rumen development, immunity and performance.

Maxx Calf Health contains Diamond V XPC, a fermentation product that has been shown to have beneficial effects on daily liveweight gain, feed conversion, ruminal and intestinal development and support stock through respiratory challenges.

Minerals, vitamins and trace elements are included to complement starter and rearer pellets and to help support immune development, metabolism and growth. Zinpro Availa® zinc is added for its benefits in rumen integrity as well as immune function and response. Finally, natural decongestants from plant extracts and essential oils support a healthy respiratory system during periods of stress.

Maxx Calf Health is suitable for all dairy and beef calves from two weeks of age through to breeding or fattening cattle finishing rations.

Features and benefits:

- Contains Diamond V XPC, to aid daily liveweight gain, feed conversion efficiency, ruminal and intestinal development and also support stock through respiratory challenge.
- Includes Zinpro Availa® zinc to help optimise immune function and rumen integrity during times of stress, as well as improved lifetime performance.
- Contains natural decongestants from plant extracts and essential oils to help support a healthy respiratory system during periods of stress.
- Contains Phytotec to support robust digestive health, daily live weight gain and improved feed conversion efficiency.
- Available in 22.5kg pack size.

Ideal for:

- All dairy and beef calves and youngstock from 2 weeks of age onwards fed alongside starter/rearer.
- Calves and youngstock at risk of disease challenges during periods of physical (e.g. weaning) and environmental (e.g. housing) stress.

User guide:

- Offer free-access at a ratio of one 22.5kg bucket per 15 calves or youngstock.
- Minimum of two blocks in pen or paddock to ensure access for all calves.
- Ensure ad-lib forage is always available.
- Do not feed to sheep (contains copper).

Typical intakes:

- Calves to 12 weeks up to 80g/head/day[#].
- Weaned calves and youngstock up to 300g/head/day[#].

[#]Consumption will be influenced by number of feed points per head of stock, forage availability and quality, other feeds available, age and breed of stock and proximity to water sources.

Product specification:

Crude protein %	8
Crude fat %	6
Crude fibre%	0.8
Crude ash %	23
Energy (MJ ME/kg DM)	14
Typical sugars (as sucrose) %	36
Calcium %	3
Phosphorus %	1.5
Magnesium %	0.3
Sodium %	2
Selenium* mg/kg	5
Iodine mg/kg	10
Manganese mg/kg	700
Zinc** mg/kg	1000
Copper mg/kg	50
Vitamin A iu/kg	25,000
Vitamin D ₃ iu/kg	5,000
Vitamin E iu/kg	3,000
