

# Product Sheet

## 16% Value Calf

### Key Points

- 16% Value Calf is a cost-effective feed to rear calves and a good complement to weaned calves that are grazing, to ensure continued growth.
- It provides energy, protein and all the nutrients to aid calf growth & development.
- It contains Bovatec® a coccidiostat that has been accurately and evenly incorporated for protection against coccidiosis

### Typical Analysis

ME (MJ/kg)	11.5
CP	16%
NDF	25%

### Ingredients selected from

Grains and grain by-products, Vegetable proteins, Protein meal by-products, Molasses, Minerals, Zeolite Mould inhibitor, Vegetable fats & oils, \*Bovatec® 20CC, Vitamins and Trace Elements, Flavourant

### Feed recommendations

Typically, calves can be weaned from milk when consuming 1kg per head per day for 3 consecutive days. Continue to offer pellets post-weaning, to help maintain growth during the transition to a grass-based diet. 16% Value Calf is typically fed at 1-2 kg/head/day post weaning. Always give calves access to clean drinking water and roughage such as quality hay or straw.

**\*Indications:** 16% Value Calf contains 100mg/kg Lasalocid as 500mg/kg Bovatec® 20CC. Fed at 1kg/calf/day to provide 100mg/calf/day. Do not feed more than 400mg/head/day.

**Cautions:** Do not allow dogs, horses or other equids, alpacas, llamas or other camelids access to feeds containing Bovatec®, as ingestion by these species may be fatal. Care must be exercised when feeding concurrently with other antimicrobials. Do not feed with other ionophores e.g. monensin capsules, liquid or premix. Do not exceed recommended dose rates. Not to be used for single dose treatment. Bovatec® 20CC is registered pursuant to the ACVM Act 1997 No A009679. See [www.eatsafe.nzfsa.govt.nz](http://www.eatsafe.nzfsa.govt.nz) for registration

**Conditions:** Withholding periods: Cattle meat and milk NIL. Not to be fed to Bobby Calves. See product label for more detail.

**Available:** Nationwide in 20 kg bags.
